

# Technical Manual

## System Requirements

- Operating System: Windows 10+, macOS 12+, or Linux (Ubuntu 20.04+).
- Processor: Dual-core 2.0GHz or faster.
- Memory: Minimum 4GB RAM (8GB recommended).
- Storage: At least 500MB of free disk space.
- Network: Stable broadband connection required.

## Installation Overview

Download the installer for your operating system. Run the installation wizard, select the installation directory, and confirm dependencies such as Python 3.10 or Node.js 18+ are available.

## Authentication Configuration

Open the configuration directory and edit the *config.yaml* file. Provide your API key, OAuth client ID, and OAuth secret. Save your changes and restart the service to apply the new authentication settings.
